

BISBox

BUSINESS INTERNET SERVER

| Functional, reliable, secure Internet

NCC's Business Internet Server (BISBox) provides a functional, reliable, secure and controlled Internet environment.

It effortlessly sits between you and the internet. Fits into your current system as an optional management tool.

Essentially an Internet Gateway Server, BISBox connects and manages your enterprise, organization or small business' internet activity. It includes components like a Firewall, Proxy Server, VPN Server, Email Server with Webmail and Virus scanning functionality, an FTP Server and Traffic Monitoring utilities.

The BISBox is supplied and maintained by Network & Computing Consultants (Pty) Ltd and supported by NCC's NOC (Network Operations Centre).

The BISBox is a highly efficient, cost effective and easy to use business tool, monitored and managed through a Web Interface.

Our eyes on-site. Faster resolution times, reduced call-outs.

| Features of BISBox

Mail Server: Host your domain's external and local email messages

Proxy Server: Caches, controls and manages Internet Web traffic (Access Security, Banned Lists)

Firewall: Crucial service to protect your server and local area network from the Internet

Email Virus Scanning: Scan all incoming and Intranet email messages going through Mail Server

Webmail: Enable you to read your new email messages from anywhere through the Web.

Fax Receiver: Receive Incoming Faxes delivered to a Faxmaster by email (one line only) .

Proxy Reports: Monthly usage and management information on all Internet Web browsing.

Dynamic DNS: In conjunction with a NCC ADSL we dynamically point a domain address to your server.

Remote BisBox Maintenance: Major Linux release updates, Security Patches, Anti-Virus Signature updates.

Anti-virus Updates: Scheduled daily update of Anti-virus signatures (when available).

Improved Utilization: Integrated services limit and saves Internet bandwidth.
